Decoding the dark side of cancer

Cancer's next frontier lies in the genome's "dark" 98% – hidden proteins, non-canonical RNAs, and regulatory layers invisible to conventional sequencing. This meeting brings together the scientists decoding that hidden biology and the AI, chemical, and imaging tools now making it visible and druggable. From immune evasion to drug resistance to AI-designed molecules, speakers will chart how this dark proteome is reshaping cancer diagnostics and therapy.

Confirmed speakers

Maria Abad

Altos Labs, Cambridge
Institute, United Kingdom

Karen Adelman

Harvard Medical School, USA

Žiga Avsec

DeepMind, United Kingdom

Alberto Bardelli

University of Torino, Italy

Michal Bassani-

Sternberg

Ludwig Cancer Research,
Switzerland

Paul Bastard

Institut Imagine, France

Sandra Blanco

Centro de Investigación del
Cáncer, Spain

Jennifer Dionne

Stanford University, USA and
CEO of PumpkinSeed Bio

César de la Fuente

University of Pennsylvania, USA

Yasuhiro Murakawa

RIKEN, Japan

Oded Rechavi

Tel Aviv University, Israel

Natalie Scholes

Netherlands Cancer Institute,
the Netherlands

Ataman Sendoel

University of Zurich,
Switzerland

Marvin Tanenbaum

Hubrecht Institute and
Oncode Institute,
The Netherlands

Andrea Ventura

Memorial Sloan Kettering
Cancer Center, USA

Shira Weingarten -

Gabbay

Harvard Medical School,
USACancer Center, USA

When?

**Thursday 5 November
and Friday 6 November**

8:30 - 18:10

Where?

**KIT Royal Tropical
Institute**

Mauritskade 64,
Amsterdam

Scientific Committee

Reuven Agami

Netherlands Cancer Institute

Miao-Ping Chien

Erasmus MC

Sebastiaan van Heesch

Princess Máxima Center
